Operator-supplied certificates — require Digicert

Not auto-generated. A new certificate must be obtained from Digicert before rotation (out-of-band; not included in the Apply Changes time above).

Estimate breakdown

Campaign	Applies	Time (low – high)
Leaf certs	folded into the shared apply #2	included
CA certs (full batch)	2× foundation-wide on all tiles — all CAs + leaves	48h 08m – 119h 20m
Total		48h 08m – 119h 20m

Model & assumptions

- 20m overhead per Apply Changes; 4–10m per VM.
- A FOUNDATION CA = 3 foundation-wide applies; a services TLS CA = 2 foundation + 1 deployment applies; a BOSH trusted-store CA = 1 foundation-wide apply (swap in place); a

deployment CA = 3 on its deployment.

- Estimate is **Apply Changes compute time only** — it excludes change-window / approval gaps between phases, which often dominate the wall-clock for CA rotations.
